

Amendments to the Specification

Please amend paragraph {0018} of the specification as follows:

[0018] Figure 1 shows an embodiment of the invention wherein two pipes 14 are supported, and these pipes are positioned substantially horizontally with respect to base 18, or substantially parallel thereto. These pipes 14 are also ~~space~~ spaced vertically at a different distance from base 18, and are further typically spaced laterally a different distance from compressor 12.

Please amend paragraph [0019] of the specification as follows:

[0019] In accordance with the invention, support members 16 can advantageously be positioned to be connected to both pipes 14. A plurality of supports, two (2) in the embodiment shown in Figure 1, can also be provided and can advantageously be spaced along the length of intermediate portion 22. It should of course be appreciated that the exact location and number of supports to be used depends upon the configuration of pipe to be supported. as well as the vibration expected to be caused by operation of compressor 12.
